1. Introduction

I once knew a boy, whose idea of an ideal day was watching a movie on the first day, catching it on the first show. I once knew a boy who could sit in front of a television 15 feet away and watch a movie in rapt interest while the world bustled around him. I also knew a boy who could spout Master Yoda better than he could quote Shakespeare. He was a diehard buff when John Rambo took on the Vietcong... He remained one when Rambo ventured back into war torn Myanmar.

Say hello to the movie addict that's in all of us.

Aren't we all movie addicts in some sense of the term? Who hasn't felt the heart-jerk when Humphrey Bogart gazes at Ingrid Bergman with a "Here's looking at you, kid"; or felt the style punch with a "The name's Bond... James Bond".

The first film came out in 1890's. The world has been a better place since. The World Wide Web was born late in 1990. It made the world even better. A single invention which was meant to bring scientists closer has brought you and me within the reach of a click. Thankfully, the world of entertainment has jumped on the racing wagon.

Nothing can replace the visual spectacle of a big screen but the mouse and the modem has gifted us an open ticket to a front row seat in the world of movies. Yesterday, we waited for the visual feast; today we can pick it from the web.

If you like your two hour highs with popcorn, then this guide is for you.

2. Getting your fix on the internet

The internet is like a virtual oyster for all our entertainment and information needs. The best thing about it is that we can choose a film to go with our mood.

We have movies like The Dark Knight in *Action*, Indiana Jones in *Adventure*, Wall-E in *Animation*, The Great Dictator in *Comedy*, The Godfather in *Drama*, The Blair Witch Project in *Horror/Suspense*, all of Harry Potter in *Family*, Casablanca in *Romance*, Moulin Rouge in *Musicals*, Star Wars in *Sci W Fi/Fantasy* and Jaws in *Thriller*. These apart, we also get to see standout *Foreign Films* like Seven Samurai. Another genre that deserves a place in the sun is the *Short Film* or *Documentary* – I hope you have seen ‘An Inconvenient Truth’.

With our choice made, it takes a few clicks to dive into the world of movies.

2.1 Online meeting places for the moviegoer

Movies are social glue. Like the weather, they are conversation starters. The internet has proved as effective as your cabal of friends in letting you in on the buzz about the latest all-star cast. Which movies are worth the dollar? Social networking is an online meet of like-minded individuals and when the shared interest is movies, there are a whole lot of movie forums, web communities and social websites which quench out thirst for first hand opinions.

Type in some of these...

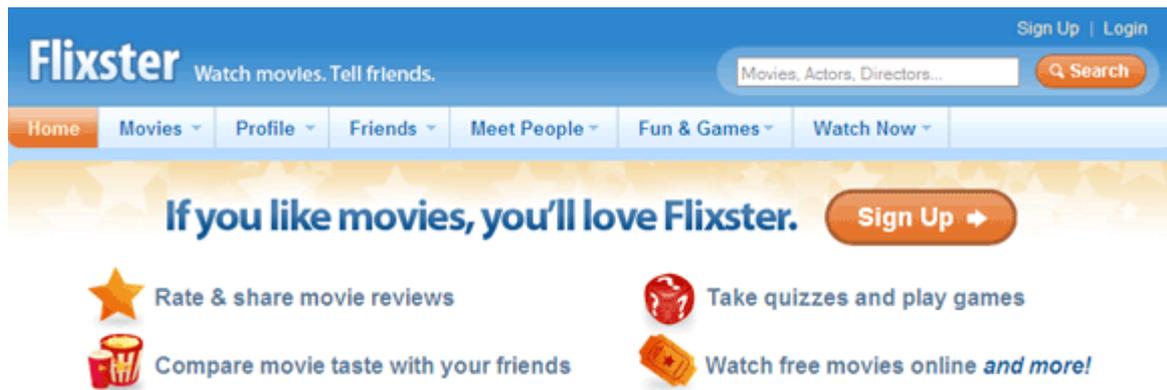

The Internet Movie Database [<http://www.imdb.com/>]

The site has so much depth that it's easy to get lost in the sea of information. Sample this, IMDB has individual message boards *for each film genre* (interestingly, the *Horror* board has 40,000+ postings. - by far the highest!).

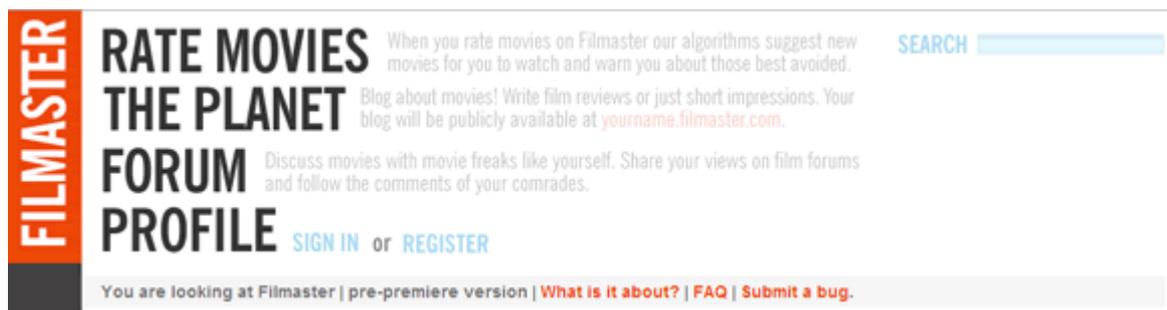

Then there are special boards to discuss specific movies and TV shows, and specific people. According to IMDB, that's 1.2 million titles and over 2.7 million people being discussed. Look up your favorite movie, actor or actress and you will reach a board chatting about it. Would you rather be anywhere else?

Flixter [<http://www.flixster.com/>]

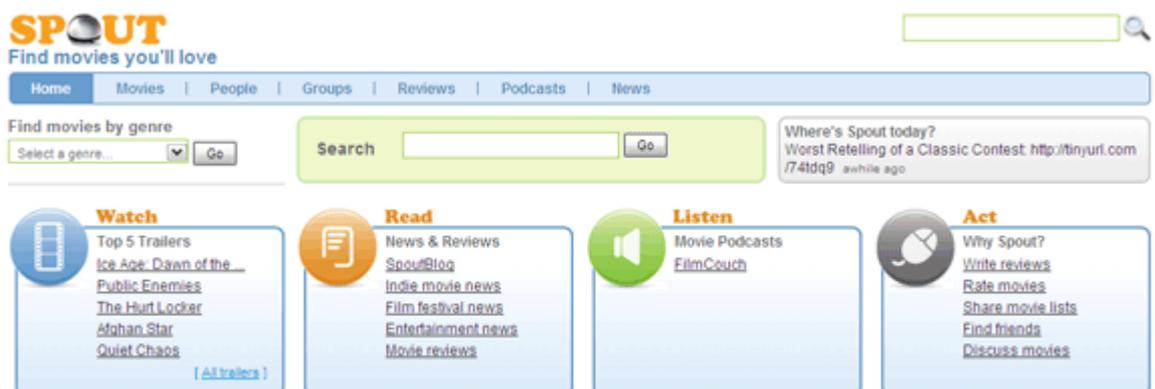

It is a very popular hangout for movie lovers. With nearly 15 million unique visitors, the community is large enough to rival any social networking site. Flixter has lots of features to keep the moviephile engaged – movie profiles, actors, photos, news, reviews, ratings, previews, quizzes, showtimes and of course, chit chat. Try out the quizzes for some movie addiction.

Filmaster [<http://filmaster.com/>]

A serious site about serious film buffs. It is in a niche of its own. Filmaster is a social network for movie fans with personalized content (have your own movie blog) and recommendations. It looks like a thinking man's Flixter. Rate and review, discuss and suggest. The well-designed website has a very cultured feel.

Spout [<http://www.spout.com/>]

The Internet Guide for the Movie Addict

Discuss everything from the upcoming Harry Potter to an obscure independent film. Get the dope on film festivals as they happen around the world. Spout defines what it's about in four sweeps – Watch (trailers), Read (new and reviews), Listen (podcasts), Act (write, share and discuss).

Jaman [<http://www.jaman.com/>]

Interestingly, Jaman diversifies from mainstream flicks. Here, you can not only discuss independent and crossover movies (American and International) but can even watch them online. Jaman also has a blog on upcoming film festivals, movie releases, and Oscar chatter.

2.2 Search for movie reviews and views

The thing about opinions is that everyone has one. And movies don't escape this cliché. Movie reviews are always a good way to know whether you are going to get a bang for your buck. To know what's good, bad or downright ugly about a movie checkout some of these well-known sources for movie reviews.

The Internet Movie Database [<http://www.imdb.com/>]

We mentioned this before; we will keep mentioning it again. If over 57 million people visit this link, it's because this is an absolute trove of information on every movie and TV show. And combined with the next two in the list, that's all you actually need.

IMDB has a fairly objective review system of weighted averages. The number of votes is mentioned under user ratings, clicking on which takes us to a page with demographic breakdowns. To get their opinions, click on user comments or external reviews to get all the good (or vitriolic) word on a movie. IMDB also has a unique way of giving a recommendation. It compares a movie with others in its genre on the basis of keywords, user votes, genre and title. IMDB uses these measures to automatically create a ranking system. The recommendations can be found near the end of the page. Clicking the *Show more recommendations* link takes you to another page where you get more information including possible show times for the US.

Recommendations for **Hannibal** (2001) [More at IMDbPro »](#)

[How do these recommendations work?](#)

Suggested by the database	Showtimes (US only)	Available @Amazon	User Rating
Sin City (2005)		DVD VHS	8.4
Live Free or Die Hard (2007)	📺	DVD	7.6
Red Dragon (2002)	📺	DVD VHS	7.3
The Silence of the Lambs (1991)		DVD VHS	8.7
Rambo (2008)	📺	DVD	7.3

You can also use the **IMDB Recommends** search box to find a list of similar movies you might like but its result is more of a list based on the title rather than the plot.

Rotten Tomatoes [<http://www.rottentomatoes.com/>]

Transformers: Revenge of the Fallen (2009)

T-Meter Critics | Top Critics | RT Community | My Critics | My Friends

20% TOMATOMETER

Reviews Counted: 204

Share Times & Tickets

If a movie hits the screen, be sure opinions will follow. The name of course, is taken from the age old act of throwing tomatoes for a bad performance. This site looks at the movies critically through its 'Tomatometer'. It trawls through a lot of movie reviews on the net and then the website decides if the movie is positive ('fresh'-marked by a small icon of a red tomato) or negative ('rotten'-marked by a small icon of a green splattered tomato).

The 'Tomatometer' is a percentage mix of positive and negative reviews given by an eclectic bunch of professionals and amateurs. *T-Meter Critics* gives the voice of professional experts. *Top Critics* section pulls in the views of media outlets like Time and NY Times. The fans pitch in with opinions in the *RT Community* section. You can create your own 'panel of critics' with custom choices in *My Critics*. And finally, create your own little community by inviting your friends over and sharing thoughts in the *My Friends* section.

Reading both sides of reasoning gives a fair idea of what a movie is all about. Rotten Tomatoes manages a fair balance between the reviewer and the fan.

Wikipedia [<http://www.wikipedia.org/>]

Critical reception

The Hangover has received primarily positive reviews. It currently holds a 78% positive response rating on review aggregator Rotten Tomatoes, but Ebert gave it three and a half stars out of four, stating "Now this is what I'm talkin' about. *The Hangover* is a funny movie, flat out, all the way thru funny. Most of the dialogue is funny almost line by line."^[9]

Box office

On its first day of release, the film drew an estimated \$16.5 million on approximately 4,500 screens at 3,269 sites, beating out the big budgeted release of the weekend — for first day take.^[10] Although initial studio projections had the Disney/Pixar film *Up* holding on to the #1 slot for a second figures, bolstered by a surprisingly strong Sunday showing, ultimately had *The Hangover* finishing first for the weekend with \$45.0 million, narrow

Search this online encyclopedia and you are sure to find the complete dope on them. If the movie is there, it's a great place to learn more about the cast, crew, plot and the making. A Google search for a movie will give the Wikipedia entry among the top five results usually. Two sections – *Critical reaction* and *Box Office* tells all about the movie. As Wikipedia information is sourced there are numerous external references which give us more sources to look at.

Metacritic [<http://www.metacritic.com/film/>]

The screenshot shows the Metacritic page for the movie 'Angels & Demons' by Columbia Pictures (Sony). At the top, there are links for 'Printer-Friendly Version', 'Email This Page To A Friend', and 'Discuss This In Our Forums'. The movie title and studio are prominently displayed. Below the title is a photo of a man in a dark suit. To the right of the photo, the 'Critics' score is 4.8 (Mixed or average reviews) based on 36 reviews, with a 'metascore' of 48 out of 100. The 'Users' score is 5.9 (out of 10) based on 94 votes. Below this, there is a section titled 'What The Critics Said' with a disclaimer about the scoring system. Two reviews are shown: one from the Chicago Sun-Times by Roger Ebert with a score of 75, and one from The Hollywood Reporter by Deborah Young with a score of 70. The review from The Hollywood Reporter is partially visible, starting with 'Plucking the same violent, occult strings as "Da Vinci" while avoiding its'.

They deal with criticism. It has a scoring system that takes in a cross-section of reviews from a carefully-screened group of respected critics. Normal viewers are also given equal space. *What the critics said...* provides excerpts of what the critics said with a link to the wordy source. Critics' thoughts are color indicated by green, yellow and red. User's views are also similarly shown along with what they thought about the movie. Metacritic has a pretty vibrant community forum too.

Spill [<http://www.spill.com/>]

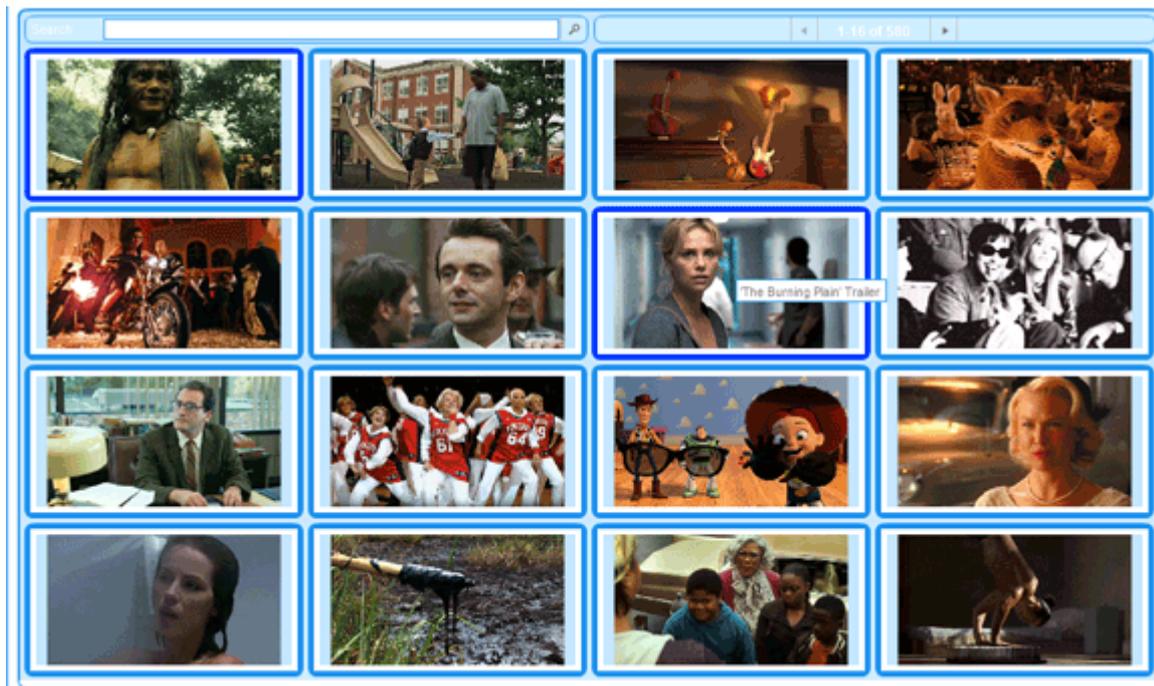

Three words - it's irreverent, it's blunt and it's funny. Check out the animated characters with their take on a movie. This site's motto is, 'if it's crap, we will tell you.'

2.3 Get a sneak preview with trailers

Movie trailers are designed to whet your appetite and give you a tantalizing glimpse of what's coming this summer. The internet is a vast archive of the old and a marketing medium for the new. For any old film you are planning to download, rent or buy, there's a short snippet somewhere. For every new release, there is usually an entire website built around it.

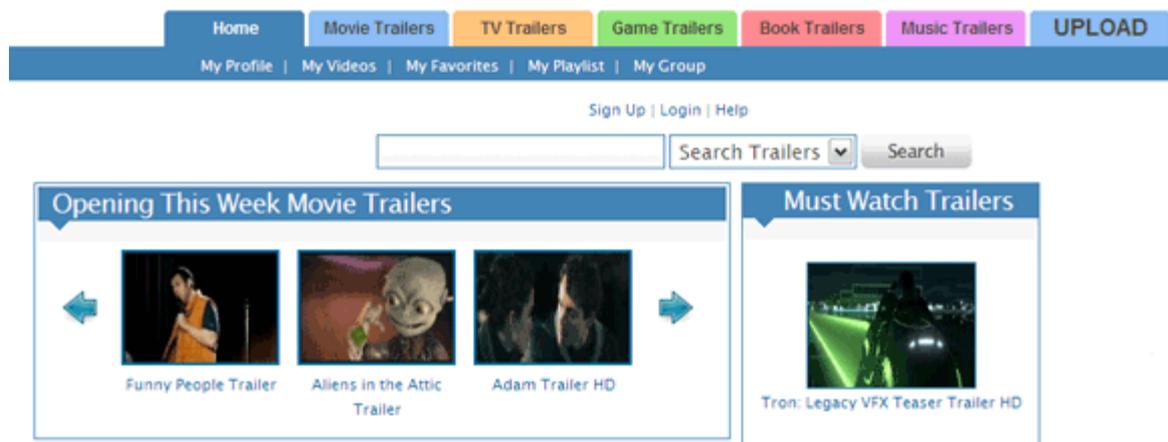

Search, browse and play for your personal curtain raiser at some of these sites. Most sites need you to have Flash player installed.

Hollywood.com [<http://www.hollywood.com/trailers/>]

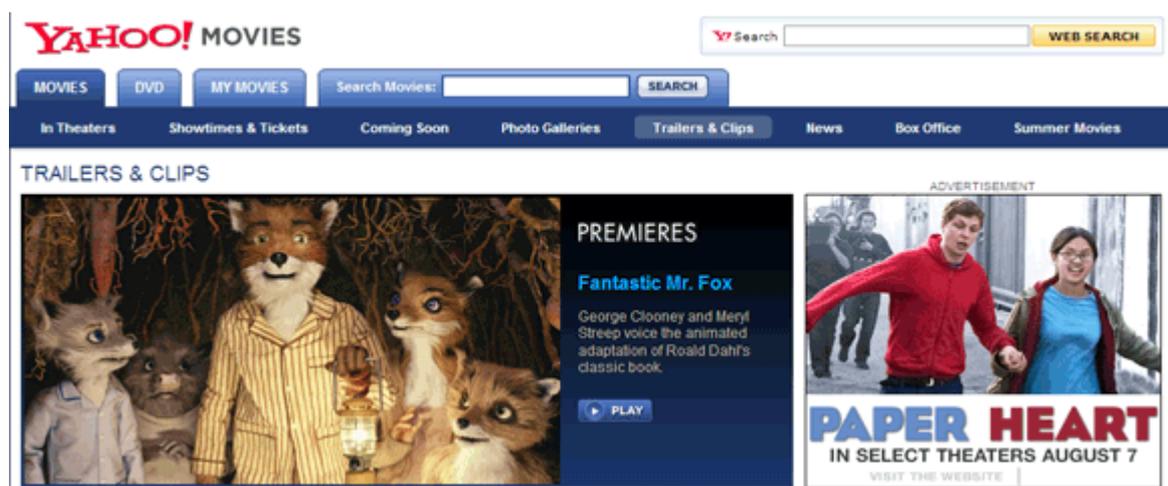

You don't need a byline to convey what this site is meant to be. It's right up there as a place to bookmark with nearly 5 million monthly visits by movie lovers. It is meant to be a serious site for the inside scoop free from the rag style gossip. Nearly 3500 trailers supported by a clean-cut interface and an updated Google site search engine is enough for most movie lovers. Get HD trailers, TV clips and interviews with the who's who of Hollywood. Also, take a sneak peek at video footages of premieres happening around the world.

TrailerSpy [<http://www.trailerspy.com/>]

TrailerSpy is devoted solely to trailers. The top menu lists trailers covering movies, TV, games, books and movies. The movie trailer section covers a variety of genres from mainstream to independent. There's a section for fan-made trailers too. To search and watch the precise trailer is not too difficult through tags, categories and the search box. The site also has a community of movie lovers.

Yahoo! Movies [<http://movies.yahoo.com/trailers/>]

Yahoo! Movies is about movie reviews, showtimes and the latest trailers. The site is easy to navigate with clear graphics and is not cluttered by ads. The trailers and clips archive is a browse-able source of hundreds of trailers. Yahoo! Movies also gives showtime listings and you can purchase tickets online (via MovieTickets.com). Yahoo! Movie trailers also come in Deutsch, French, Spanish, Italian and other languages.

YouTube [<http://www.youtube.com/>]

YouTube does not need an introduction. If there is a video, there's a high chance it has been uploaded on the world's most popular video sharing site. YouTube is an important destination even though it is not purely a movie trailer site. But if you don't get it anywhere else, it can be here.

The Internet Guide for the Movie Addict

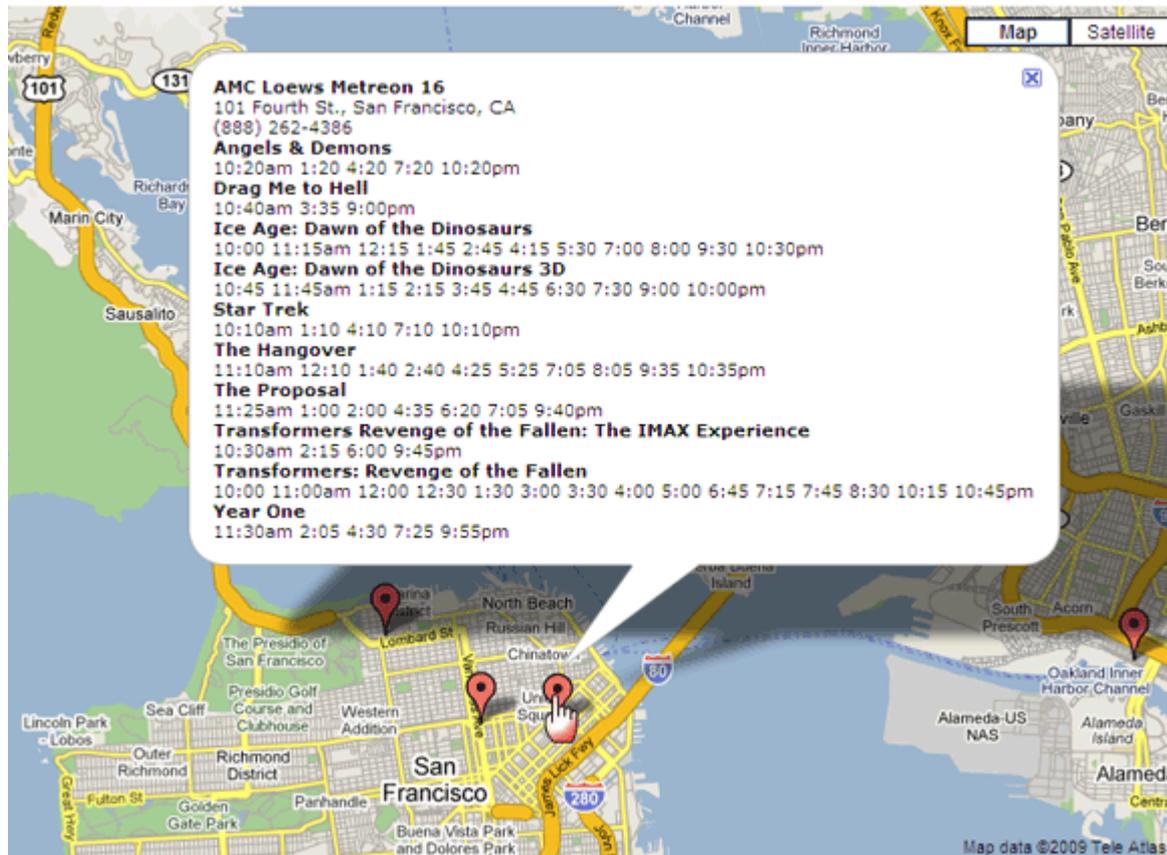

Another well put together site which showcases the latest trailers apart from other info.

The above list is just the tip of the iceberg as far as trailer sites go. We have already covered the big leaguers like IMDB and Rotten Tomatoes. Then there's Google search which may take you to directly to the homepage of the movie being released. It's only the writing constraints that prevent the mention of many more on the list.

2.4 What's playing near you?

The internet delivers movie information faster than you can say – One flew over the cuckoo's nest. Movie names, casts, movie schedules or ticket prices, get it all in a blink. Thanks to those websites which give you localized information just like the town newspaper.

MovieShowTimeMap [<http://hurwi.net/map/>]

It's a Google mash-up tool which gives you the movie schedule with a mouse over. It's cool because you just type in your address and just place your mouse over the icons on the Google map. Unfortunately, it works only for U.S cities.

Read more about it here [<http://www.makeuseof.com/dir/movieshowtimemap-find-movie-showtimes-area/>] on MakeUseOf.com

Favorite Theater RSS Feed Generator [<http://isnoop.net/rss/theater.php>]

We return to Google but combine it with the power of RSS feeds. This tool uses Google search to find the showtime lists from nearby theaters and gives you the results courtesy of RSS feeds. Enter your city, state or zip and RSS feeds keep you in the loop.

More on how RSS can feed the movie addict here [<http://www.makeuseof.com/tag/4-rss-feeds-for-the-movies-addict/>].

There's no 'theater' like our own homes. And why should we miss out on a good movie on the boob tube. So to check if there's a good movie on the TV today use something like -

LocateTV [<http://www.locatetv.com/>]

It's a free service which searches for TV program listings. More attuned for the U.S and U.K, results give you the showtimes of your favorite episodes and movies with its cast, synopsis and whether they're available online.

Read more about what's on LocateTV here [<http://www.makeuseof.com/dir/locatetv-film-tv-listings-search-engine/>].

3. Set Up Your Own Entertainment

The great thing about the web is that it's a lot like what Mrs. Gump says, "Life's a box of chocolates, Forrest. You never know what you're gonna get."

It's all to do with the limitless choices we have in the online world. Rich, varied and more often than not - overflowing. So how do we put together our entertainment? Do I go online or should I download it and take it with me wherever I go? How do I catch Angelina's pout without the grainy print?

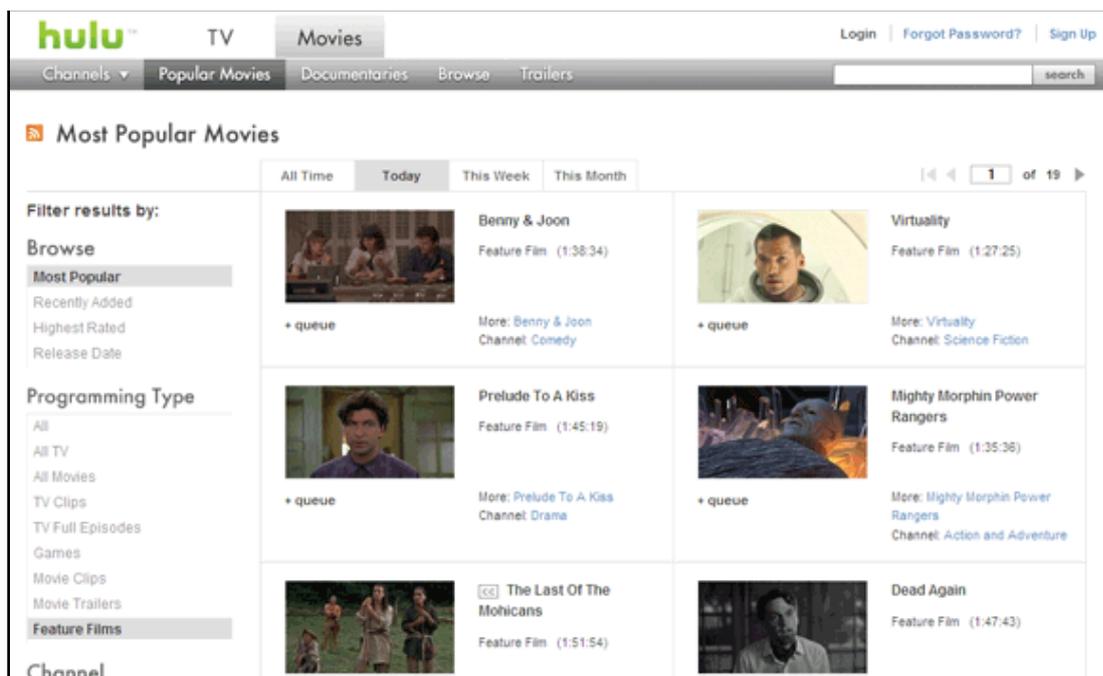

Hey, you have questions and the web has answers. So flatten your cushions and as a first let's try out the online way.

DISCLAIMER -- Some websites are legal in the way they source the content from providers such as Hollywood studios and media channels. They provide these movies/shows through a free advertisement-supported model or a subscription-based one. Then there are the web services which lie in the grey area. Distinguishing between the two is a tough call for a viewer. *The best way to avoid illegal watching (and prosecution)?* Go back to your DVD rental library or select a legal online movie website.

3.1 Watching Stuff Online

A trip to the DVD rent-out is okay, if you are still in the Stone Age (or if you don't have a good web connection). Streaming movies to your computer is the new way.

Hulu [<http://www.hulu.com/>]

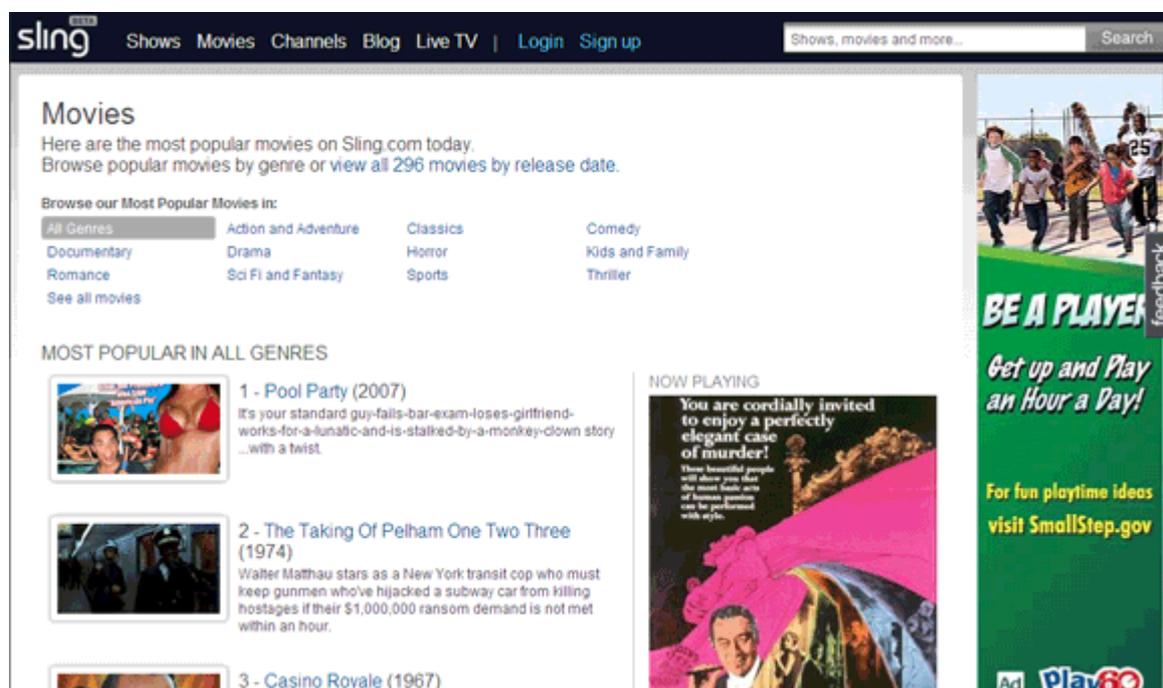

Hulu is probably among the well-known free online sites for motion pictures and TV shows. Hulu comes with the promise of content from places such as NBC, News Corp., Sony, MGM, FX, Sci-Fi Channel etc. It is slick and uncluttered with easy to follow navigation. The website is Adobe Flash based and streams at 480Kbps or 700Kbps. Video settings default at 480p though a setting of 360p for lower bandwidth is available. On the higher side, 720p videos requiring 1,500Kbps speeds for smooth streaming and high definition experience are also available.

It is free but as is the way of things, it's still ad-supported. Hulu is also only available for U.S audience so far.

Learn How to Watch Movies and Shows on Hulu & Sling from Abroad

[\[http://www.makeuseof.com/tag/how-to-watch-movies-and-shows-on-hulu-sling-from-abroad/\]](http://www.makeuseof.com/tag/how-to-watch-movies-and-shows-on-hulu-sling-from-abroad/).

Sling [\[http://www.sling.com/\]](http://www.sling.com/)

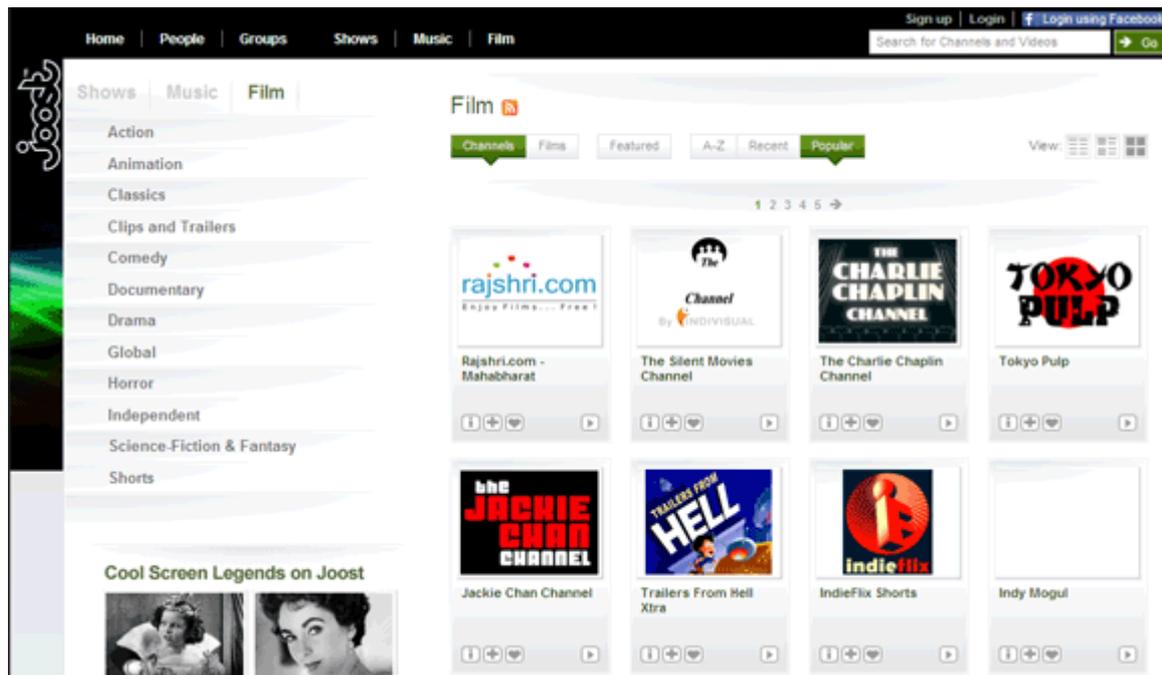

Sling is similar to Hulu in its offerings of TV shows and movies from the popular channels. Though, Hulu's selection seems to be broader. Presently, Sling showcases 282 movies in all the usual genres. Popular channels bring free content from NBC-Fox partnered Hulu, CBS, PBS, BBC America along with Web video sites like College Humor and Break.com bring you 965 TV shows and web series. Access is via a Flash video player (the SlingPlayer).

Sling is also similarly available within the U.S only.

If you are feeling left out of Hulu and Sling because you do not live in the U.S, try out How to Watch Movies and Shows on Hulu & Sling from Abroad [\[http://www.makeuseof.com/tag/how-to-watch-movies-and-shows-on-hulu-sling-from-abroad/\]](http://www.makeuseof.com/tag/how-to-watch-movies-and-shows-on-hulu-sling-from-abroad/).

Joost [<http://www.joost.com/>]

The brains behind Skype and Kazaa bring us Joost. Joost is a leading on-demand Internet TV service provider with over 250 high-definition TV programs and channels from various categories - Cartoons, Film, Comedy, Music, Documentary, Entertainment, Sports, and Lifestyle. Using P2PTV protocol to deliver its shows, it is a free legal online service. Joost also uses a Flash based web player to stream TV quality content to your PC. Joost is currently in deals with several networks including CBS, VH1, MTV, other Viacom channels as well as several other video distribution networks.

With over 15,000 TV shows and 250+ Channels, it is a viable alternative for cable. Read more about Joost at MakeUseof.com [<http://www.makeuseof.com/dir/joost/>].

Less-than-legal Sites

There are also sites like **The Pirate City** [<http://thepiratecity.org/>] and **SurfTheChannel** [<http://www.surfthechannel.com>] which aggregate thousands of the latest movies and TV series and link to the sites where these movies can be watched online internationally, at no cost.

These websites lie in the grey area. While they obey the law and do not directly stream any content from their servers, they are linking to a lot of illegal sites that do. Keep in mind that even though they offer a far wider array of movies, the picture quality on these sites is usually a lot worse than what you see on sites like Hulu or Sling.

3.2 Watching it with a Download

The bandwidth is the umbilical cord for online movie sites. Movies are streamed across the internet. What if you are on the road? Or what if you prefer to watch a bit while having your lunch and the rest with your dinner? Then the only course to follow is to download a movie and watch it at one's leisure.

The anonymity of the World Wide Web has made it the melting pot for a variety of entertainment. Some of it within the law, some beyond and some in the grey. Efforts by MPAA [<http://www.youtube.com/watch?v=l5SmrHNWhak>] have borne fruit but uploaders on the WWW have deeper roots. It is a fact of the times that with broadband use on the rise, studies say that millions of downloads of illegal movies occur each week.

Torrents have emerged as the most popular way to download movies. Just like everything else, torrent download occupies both sides of the street – legal and illegal. While stressing on end user responsibility, let me give a brief note on torrents and its use.

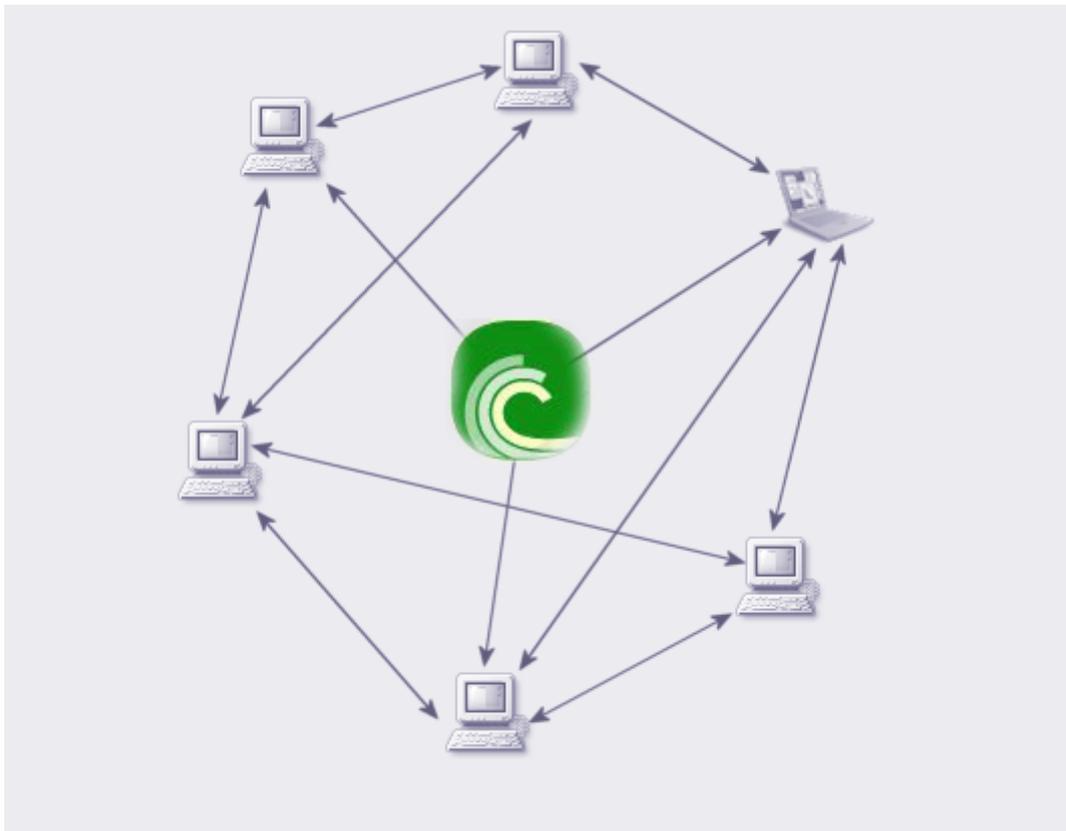

a) The Torrent Way

A *Torrent* is a file which is sent over a protocol called *BitTorrent*. Protocols of course, are simply sets of rules which define how one computer will connect with the next. The BitTorrent protocol is designed such that users connect to each other directly (without a central server) to send and receive portions of a file. The file can be of any type – a song, a game, an application or a movie. So the hosting and the downloading are spread out over many computers, thus reducing the load on any one computer. When a torrent download is started, the BitTorrent network finds multiple computers with the file and downloads different parts of the file from each computer.

Each user participates in the BitTorrent network using a special piece of software called the BitTorrent client. The BitTorrent client first downloads a *.torrent* file – a 'map' which points to the

users sharing in the download of the file. The client understands this map and then starts the download by connecting to the users having bits of the file.

BitTorrent is on a turf all its own with its own vocabulary and way to do things. Our **Big Book of BitTorrent** [<http://www.makeuseof.com/tag/the-big-book-of-bittorrent-free-pdf/>] is just as good a starting point as any to learn more on torrents. The guide will not only hold your hands through the basics but it will also help you out with your first download.

Dedicated torrent users are zealots by another name. You can see them parked in most of the popular torrent sites like **Mininova** [<http://www.mininova.com/>], **Demonoid** [<http://www.demonoid.com/>], **Vektor** [<http://www.vektor.com/>] or **IsoHunt** [<http://www.isohunt.com/>].

Upload Gurus

The painless way towards a quality movie download is to follow the raves reserved for the good torrent uploaders. These are the guys who take the pains to upload good quality movies (usually DVD Rips).

aXXO - 'God' wouldn't be a bad name for him - Quality DVD rips averaging at 700MB, files which are properly named and linked. Though his activity has slacked off, his torrents remain popular.

KLAXXON - The 'axxo' in the name is for grabbing eyeballs. Though he lacks aXXo's finesse, he makes it up with his quality DVD rips. One negative: his file sizes average around 1.2 to 1.4 GB.

FXG - Very close to the top, FXG's uploads too hover near the 700MB size. Most of his uploads also include English subtitles.

FxM - Another good uploader with uploads hardly breasting the 700MB mark.

Leetay – Though he has tapered off this year, his torrents remain trusted. His uploads also size up to around 700MB.

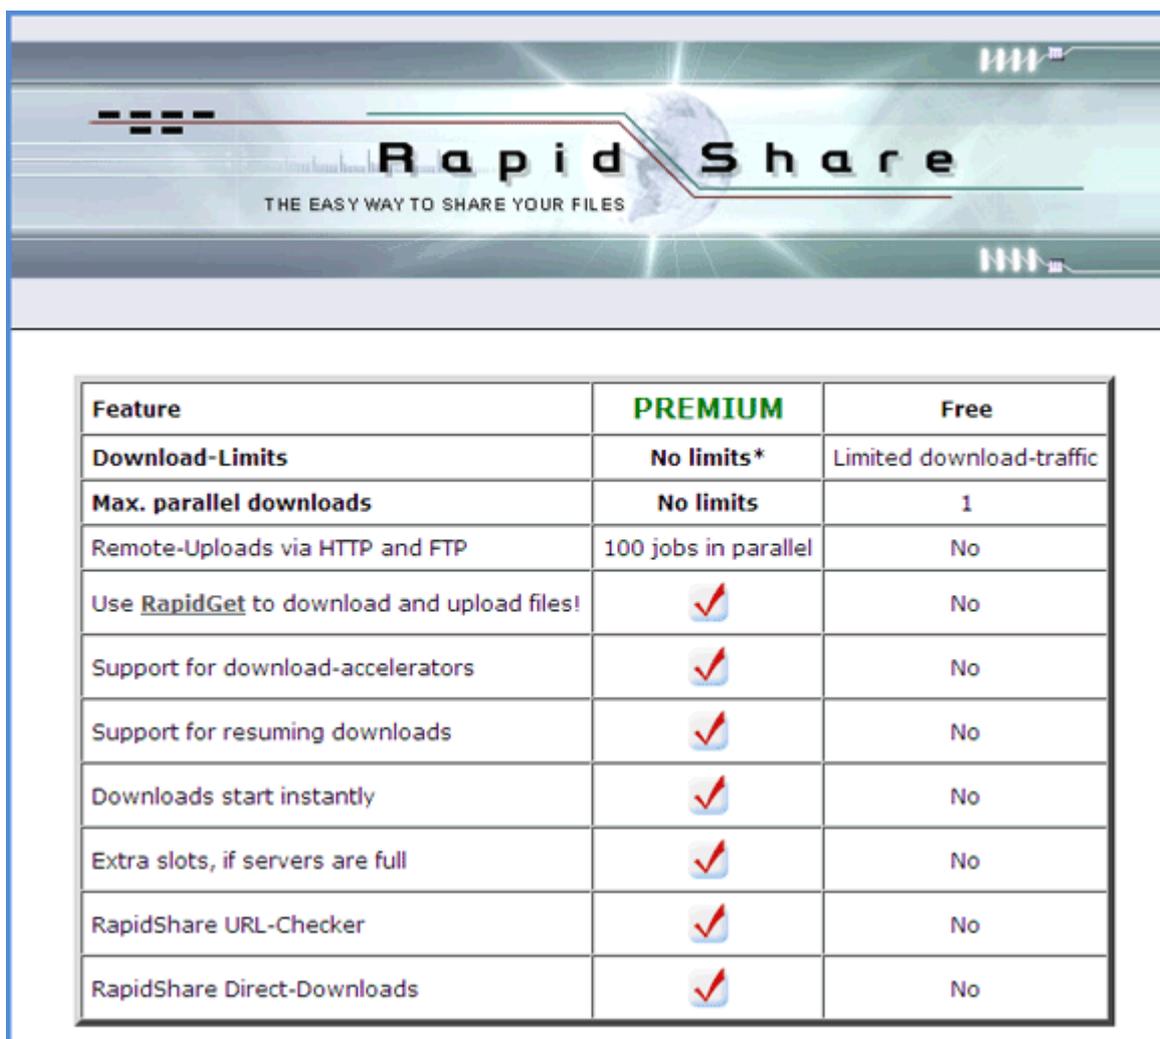

To find all movies uploaded by any uploader, just enter his name in the site search field of the torrent index site or a torrent search engine. A good torrent uploader is usually followed by generous comments by the community. The best ones of course enjoy a high rate of download activity.

As we continue with some direct downloading web services below, you will find that you can search for the above uploaders too. If you prefer direct downloads instead of torrents, simply enter a name like 'axxo' in the search engines profiled later and you will get the link.

b) File Sharing Sites

Torrents might be marching towards world domination, but file sharing services still have a large free country of their own.

RapidShare [<http://rapidshare.de/en/premium.html>]

The image shows the RapidShare logo at the top, which includes the text "Rapid Share" and "THE EASY WAY TO SHARE YOUR FILES". Below the logo is a comparison table between Premium and Free accounts.

Feature	PREMIUM	Free
Download-Limits	No limits*	Limited download-traffic
Max. parallel downloads	No limits	1
Remote-Uploads via HTTP and FTP	100 jobs in parallel	No
Use RapidGet to download and upload files!	✓	No
Support for download-accelerators	✓	No
Support for resuming downloads	✓	No
Downloads start instantly	✓	No
Extra slots, if servers are full	✓	No
RapidShare URL-Checker	✓	No
RapidShare Direct-Downloads	✓	No

It is the world's biggest single-click hosting site (and among the Top20 visited homepages in the world). And movies are just one of the things it hosts. RapidShare has a mirror site at RapidShare.com [<http://www.rapidshare.com/>].

A maximum upload limit size of 200MB/file means that a movie is only available as a split archive. Usually a DVD quality movie can be downloaded in 6-7 installments. A premium (paid) account gives you more features – no waiting times, simultaneous downloads, support for download accelerators, remote uploads via FTP and HTTP etc. The free option limits you to one download and a waiting time between each successive download. If the waiting time is not enough of a nag, there's the reverse countdown clock too. Skip all that waiting with a simple Firefox add-on called Skipscreen [<http://www.makeuseof.com/tag/use-skipscreen-to-bypass-rapidshare-advertising-waiting-screens/>].

This simple add-on and a serious browse of our Collection of Rapidshare Tools and Tricks [<http://www.makeuseof.com/tag/collection-of-rapidshare-tools-and-tricks/>] will make you an expert Rapidshare user.

Megaupload [<http://www.megaupload.com/>]

Make my link searchable/public

It provides a Java-based web application for uploading entire folders, upload/download resuming, using FTP for backup or mirroring. Maximum upload size limit using the Java uploader is 10GB as compared with the standard uploading max file size of 1.5GB. The paid service called Link Cards frees other limitations. Download managers are supported but free downloaders are restricted to 1 download stream (max 500MB) and 1 download link. Every free download has a 'slot'; the download thus depends on the availability of open slots. Read more at Megashares FAQ

[<http://www.megashares.com/faq.php>].

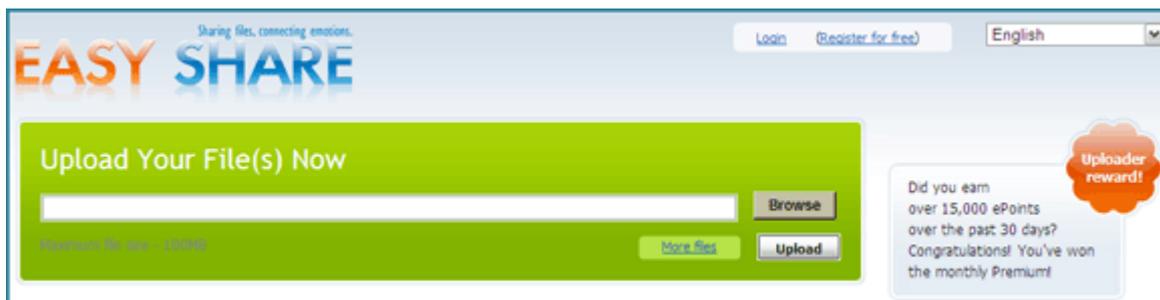

Filefactory [<http://www.filefactory.com/>]

	FileFactory Basic	FileFactory Premium	
Download speed	Capped	✔ Unlimited	Premium members get lightning fast downloads with no speed restrictions
Download limits	150MB/hour	✔ 12GB/day	Premium members can download much more data each day
Download links	Multiple pages	✔ Single page	Premium members get instant links and direct download features
Download wait time	Yes	✔ None	Premium members do not have to wait, downloads begin instantly
Simultaneous downloads	No	✔ Yes	Premium members can download many files at once
Resume support	No	✔ Yes	Premium members can resume broken downloads
Storage limit	100GB	✔ 500GB	Premium members get much more disk space
Banner ads and popups	Yes	✔ None	Premium members receive absolutely no annoying advertising

Allows a maximum 300MB per file free uploads. Larger files need to be split and uploaded. The amount of data free users can download in a 24 hour period is restricted with capped download speeds. The free basic account also allows one download stream at a time. Paid premium membership unlocks restrictions. More info can be found at the Filefactory FAQ

[<http://www.filefactory.com/help/faq.php>].

Easyshare [<http://www.easy-share.com/>]

Let's you upload a max of 100MB per file. Like other free services, you can download files for free, but with certain limitations. Unlike other sites though, Easyshare introduces ePoints, which is a way to pay users for there uploads. If your upload gets downloaded 10,000 times, you'll *seemingly* receive \$20. More on the Easyshare FAQ page [<http://www.easy-share.com/en/faq.html>].

These are just five of the many which take up the file sharing space. Some of the others are...

MyFreeFileHosting [<http://myfreefilehosting.com/>]

Gigasize [<http://www.gigasize.com/>]

Sendspace [<http://www.sendspace.com/>]

ZShare [<http://www.zshare.net/>]

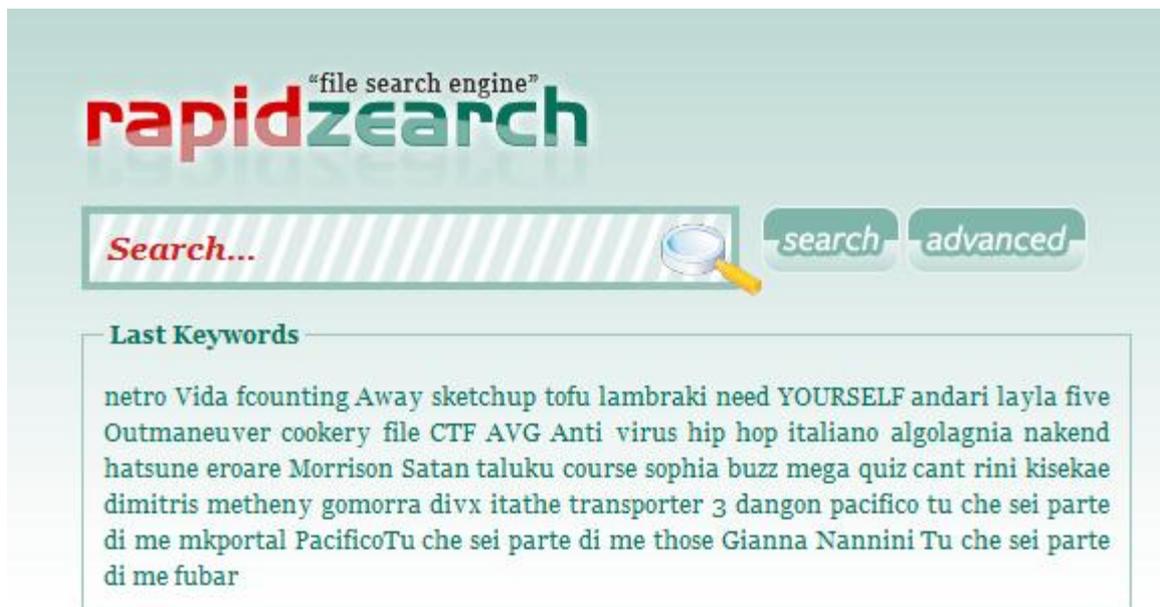

Hotfile [<http://hotfile.com/>]

On your movie hunt, you will come across a lot more. What's important is not where the files are hosted but how do you hunt out those files. Most of the files hosting services do not have searchable databases. Worry not.

c) File Sharing Search Engines

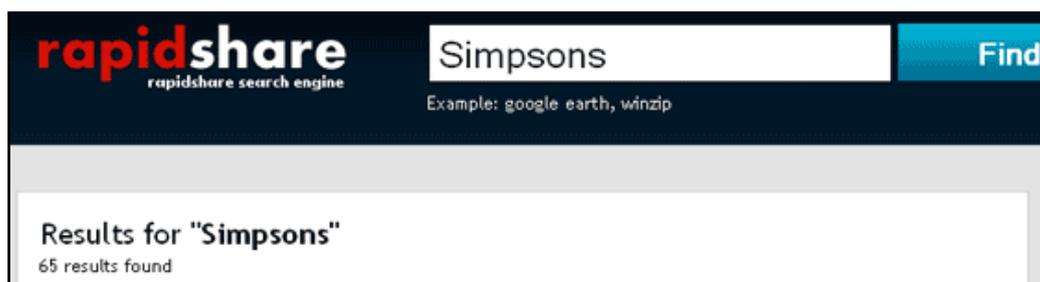

A lot of the search engines are dedicated for Rapidshare but then some others prefer the multi-pronged meta-search path. Here's a list of 10 in no particular order.

Rapidsearch [<http://www.rapidsearch.com/>] - search for files across top file sharing web sites like Rapidshare, Megaupload, Uploading, SendSpace, FileFactory and many others. The user interface is simple with basic and advanced search options.

Read more about Rapidsearch here [<http://www.makeuseof.com/dir/rapidsearch-file-search-easy/>].

Rapidshare123 [<http://www.rapidshare123.com/>] - One of the best Rapidshare search engines. It collects Rapidshare downloads from sites, forums, blogs and portals.

Read more about Rapidshare123 here [<http://www.makeuseof.com/tag/search-popular-rapidshare-files-easily-with-rapidshare123/>].

CrawlRapidShare [<http://crawlrapidshare.com/>] - It claims to be the first "realtime" Rapidshare crawler search engine. It runs a script which checks if the links displayed in the search results are valid anymore and point to real files.

CrawlRapidShare.com **FIRST REALTIME RAPIDSHARE CRAWLER SEARCH ENGINE**

CrawlRapidShare.com is the first RapidShare realtime crawler , we dont use any obs like other search engines , we crawl the web in realtime per search query with our technology so we always give you fresh results , also we have the ability to check links in realtime or by RapidShare tools.

try us and you will never use any other rapidshare search engine. dont forget to bc

Check Links Validity (Enabling this option will slow down the results page compilation)

Read more about Crawl Rapidshare here [<http://www.makeuseof.com/dir/crawl-rapidshare-search-rapidshare-real-time/>].

TotMe [<http://totme.com/home.j>] - A simple Rapidshare search engine but it filters out non-working links too.

Read more about TotMe here [<http://www.makeuseof.com/dir/totme-rapidshare-file-search/>].

Rapidshare1 [<http://www.rapidshare1.com/>] - Lets you instantly search though a dozen of Rapidshare link sharing websites, forums and message boards.

Rapidshare Search Engine RAPIDSHARE1

I want to download from rapidshare :

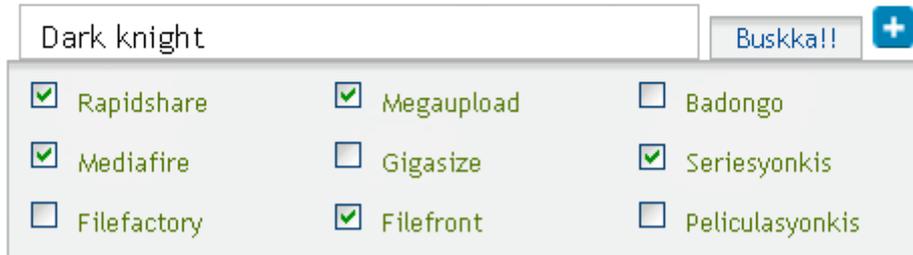

Read more about Rapidshare1 here [<http://www.makeuseof.com/dir/rapidshare1/>].

DaleYa [<http://www.daleya.com/>] – Meta-search files on Megaupload, Rapidshare and several other file sharing. You can select or deselect the file-sharing sites you want to include in the search.

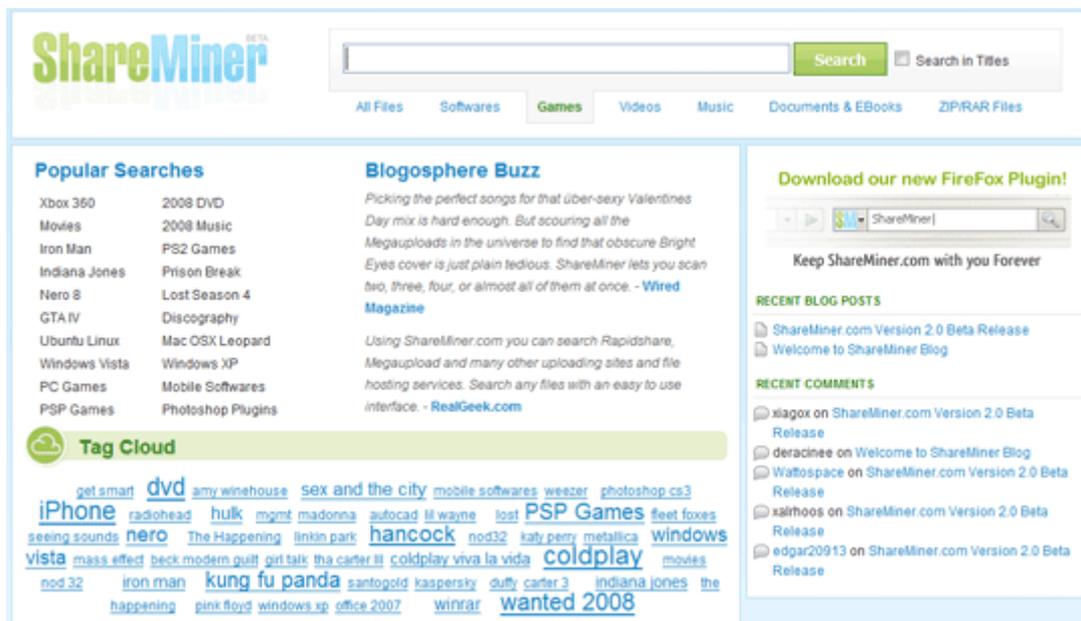

Read more about DaleYa here [<http://www.makeuseof.com/dir/daleya-search-multiple-filesharing-sites/>].

Buskka [<http://www.buskka.com/>] – A Google-powered search engine that Rapidshare, Megaupload, Badongo, Mediafire, Gigasize, Seriesyonkis, Filefactory, Filefront and Peliculasyonkis. You can either search all sites at once or select the ones you want.

Read more about Buskka here [<http://www.makeuseof.com/dir/buskka-searches-9-file-sharing-sites-simultaneously/>].

ShareMiner [<http://www.shareminer.com/>] - ShareMiner looks at Rapidshare and Megaupload and locates files by their actual file names unlike others which search webpages. You can set it up to filter by type like software, games, videos, music, docs & eBooks or archives.

Read more about ShareMiner here [<http://www.makeuseof.com/dir/shareminer-search-web-files/>].

FilesTube [<http://www.filestube.com/>] - Searches through Rapidshare, MegaUpload, Megashares, YouSendIt, SaveFile, FileFront and Badongo. Use a dropdown to filter search by media type - AVI, MP3, MPEG, MPG, RAR, WMA, WMV or ZIP. The advanced search page provides a few more options.

Read more about FilesTube here [<http://www.makeuseof.com/dir/filestube-2/>].

Findshared [<http://www.findshared.com/>] - Select or search through Rapidshare, Megaupload, Mediafire and Ziddu. If you are looking for a particular file format (*avi, wmv, mpeg, divx, iso, rmvb, mp3, exe, rar, zip, pdf*) select it through the dropdown.

The number of search engines devoted to file sharing websites makes one thing clear – you will never run out of options.

d) The Mixed Bag of Bootlegged Movie Types

Movie bootlegging has found a home and its own language on the internet. So how does piracy happen and what are the terms generally used? Films are copied in many ways and the uploaded movie gets labeled with the source. The terms used say a lot about the quality of the copy.

Cam (CAM) - Pirates record a movie as it appears on a theater screen by smuggling a camera usually mounted on a tripod into a theater. These copies are usually poor quality both visually and audibly. The scenes also sometimes show shadows of the audience moving about.

Telesync (TS or TELESYNC) – The video source remains the camera on a tripod. Telesync refers to the audio recording enhancement done by methods like using wireless transmitters from theater speakers or connecting directly to the projection equipment. The difference sometimes is difficult to tell.

PDVD – Pre-DVD is common in Asian countries especially India. Low quality CAM/TS prints are recorded on DVD and labeled as DVD rips.

Workprint (WP) – Made from an unfinished version of the film. Workprints have unedited effects and missing scenes. They also may lack un-dubbed parts. Workprints differ greatly from the final cut version. They usually have text overlays or audio disruptions to discourage pirates from spreading it. A recent case of a workprint fiasco was X-Men Origins: Wolverine.

Screener (SCR) - These promotional preview films (usually DVD or VHS) for limited reviews are provided to video retailers or film critics before a movie's official theatrical release. Pirates obtain a screener DVD and make a copy of it.

R5 - This is a retail DVD from region 5. Region 5 consists of Eastern Europe (former Soviet Union), Indian subcontinent, Africa, North Korea, and Mongolia. R5 releases stand out from normal releases in that they are a direct Telecine transfer of the film without any of the image fine tuning. The sound is also not as good as DVD quality.

Telecine – The word refers to the Telecine machine, an expensive piece of equipment that renders the film from the analog print to the digital format. The quality is slightly inferior to DVD as the source print is the copy reel instead of the final digitized version.

DVD Rip - The final cut. DVD Rips are generally distributed to regions away from the premiere zones of the film. High quality, they soon supplant any other version that might have been circulating.

DVDR – This is a copy of the original DVD but re-encoded to fit in a more compact and less expensive DVD. DVDRs resemble retail discs in that they contain menus and other disc features.

So now, if you see a downloadable file tagged with any of the following terms, you know the quality to expect. But even then there are...

e) 5 Tips to Follow for Downloading Quality Movies

1. What's a great print without a great story behind it? Check the quality of the plot in sites like IMDB or Rotten Tomatoes. Movie recommendation sites are also a lot of help.
2. If you can tell the difference between a R5 and TS, then VCDQuality [<http://www.makeuseof.com/tag/check-the-movie-quality-before-you-start-downloading/>] does the rest. The website lists all new movie releases and along with the basic information also gives a quality rating on the audio and video of the bootlegged print. Sometimes, links to screenshots and trailers are provided.
3. NFO files are little information files supplied by the encoders with the release, and most often contain things like the video/audio-bitrate, screen resolution, language, etc. You can download these NFO files from VCDQuality as an image, or in the original format. After which you can open it in a special NFO reader or even in MS Notepad. Read more about NFO readers here [<http://www.makeuseof.com/tag/the-3-best-nfo-file-readers-to-open-those-nfo-documents/>]
4. Always read the comments section if it's there on any download page. Rants or raves usually hints at the quality of the movie.
5. The number of subscribers is also a good indicator of a running website, though it might not say much about the individual movie.

f) Some Tips for Faultless Playback

Aha! Downloading's done. Now, it's time to dim the lights and dam the world outside the window. It's just gonna be me and those ugly Autobots against the Decepticons before they wreck the world. But heck, why is my media player all dark and silent?

Now, that's a too familiar sight for anyone whose home theater is the computer. If everything else is running except the movie, then the fault is perhaps with the media player or the movie file itself.

But let's not worry because if software errs, it also cures.

Preview partially downloaded video files -- This is always recommended especially for ongoing torrent downloads and thanks to some versatile media players like VLC [<http://www.videolan.org/vlc/>], GOM Player [http://www.gomlab.com/eng/GMP_Introduction.html] and KMPlayer [<http://kmplayer.kde.org/>], it is possible to play partially downloaded files and check the quality. Stop your torrent client, watch the incomplete part and if the quality agrees with you continue the download.

A full download consisting of many split WinRAR archives is fairly common with most file download sites. With WinRAR we can extract the *first* archive and play it using any of the above media players.

Open the archive using WinRAR – Click on *Extract to* – Give the destination path and under the *Miscellaneous* section put a check against *Keep broken files*. In the *Processing volume* dialog select *Process selected files only*. The first part gets extracted and WinRAR asks for the second part. Hit *Cancel*.

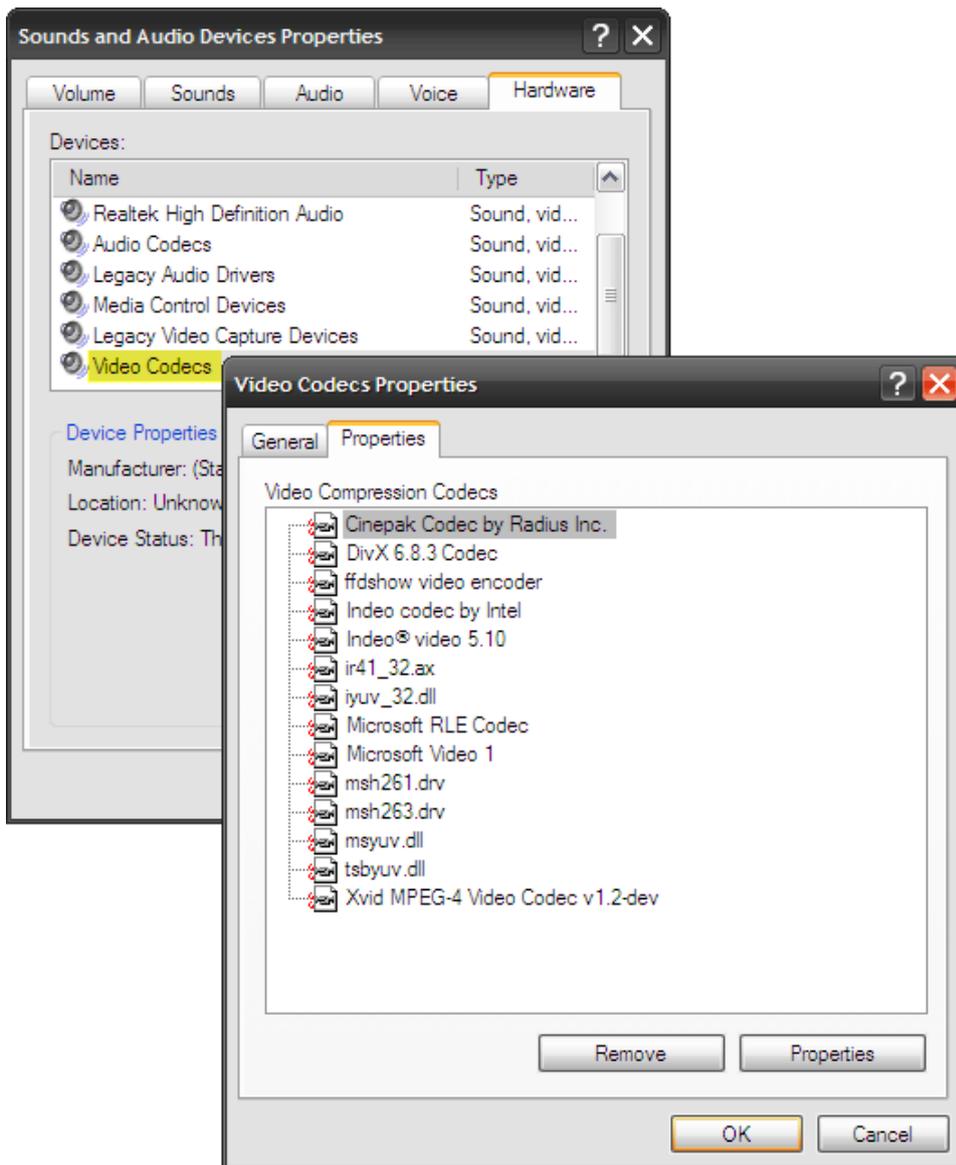

Read the full post on MakeUseOf.com [www.makeuseof.com/tag/3-easy-ways-to-preview-a-partially-downloaded-video-files/]

Playing an unplayable movie -- You think you have the perfect release. But then instead of Angelina's pout you get a black screen with a pop-up somewhere saying that the media type is not supported. That's a lousy stumble on the doorway of cinematic bliss.

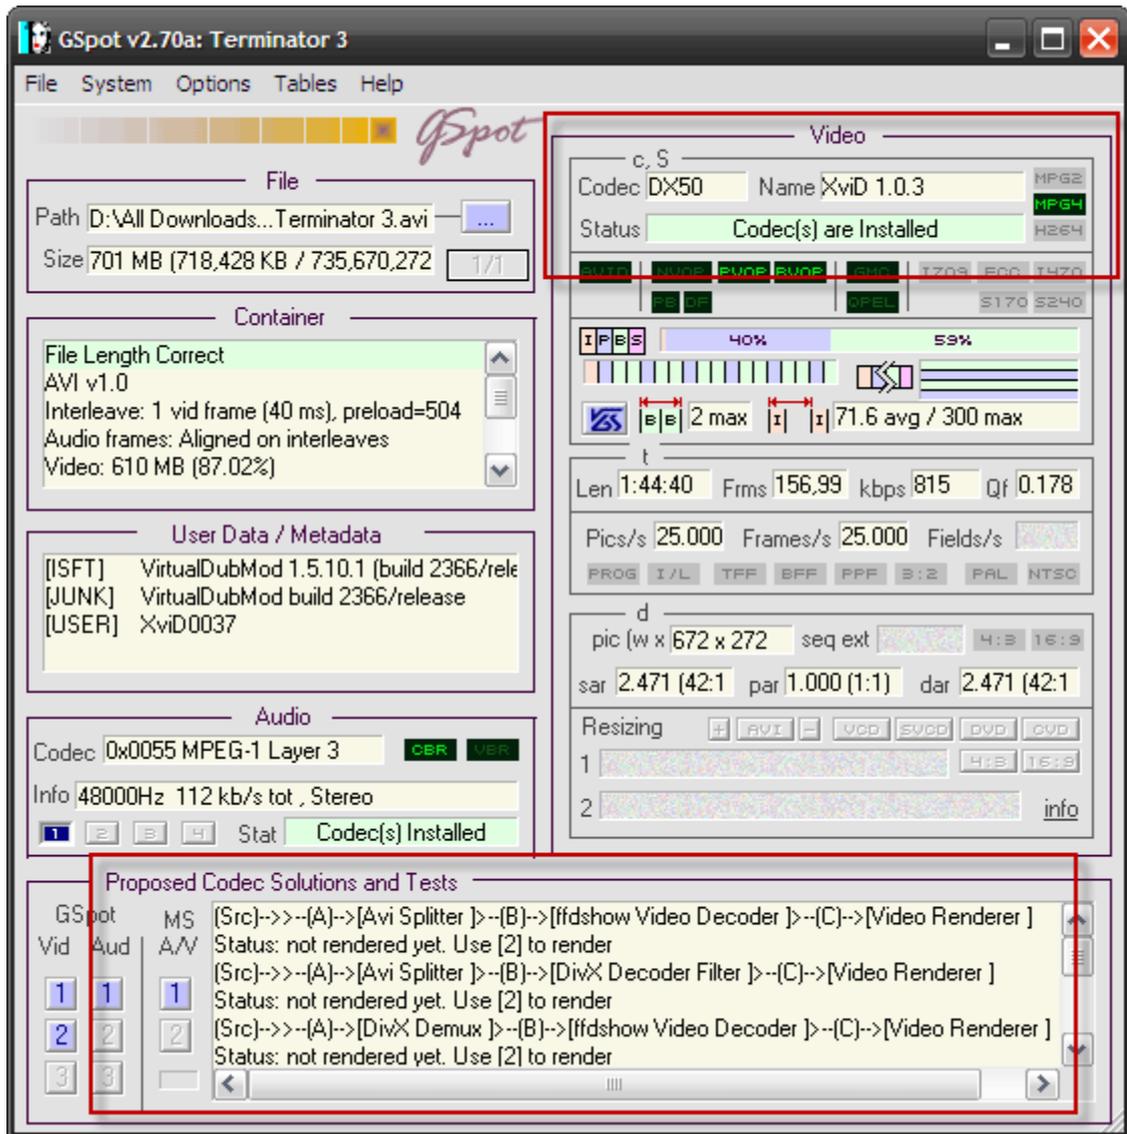

The culprit here is the media player or more specifically the codecs which do something like digital equivalent of locking-unlocking of the movie file. Codecs (coder-decoder) are used for compressing and decompressing media files so that they don't take up a lot of space and can be broadcast faster. Think of a codec like the key and the video file like the lock. So you need the same key or the codec to view the file that was used to encode the file. And sometimes your media player misses the key.

There are two ways to nail down the missing codecs –

- All installed codecs in your system (Windows) can be viewed from *Control Panel - Sounds and Audio Devices Properties - Hardware - Select Video Codecs -> Select Properties - Select Properties tab*.

- Gspot [<http://www.headbands.com/gspot/>] is a nifty free tool which identifies the codec required to play a video file. The current version hasn't been updated for some while but it is still handy.

However, these days you can just download a *codec pack* – most of these will install every kind of codec you’ll ever need. Codec Packs like K-Lite and XP Codec Pack are complete collections of all the codecs you need to enjoy to play almost every movie format that you can find on the Internet.

Free-codecs [<http://www.free-codecs.com/index.htm>], Codec Guide [<http://www.codecguide.com/>] and Movie Codec [<http://www.moviecodec.com/>] are some of the best resources for all things called codecs.

If you’re still dumbfounded by an unplaying movie, check out this post on MakeUseOf [www.makeuseof.com/tag/downloaded-an-unplayable-movie-gspot-k-lite-to-the-rescue/]

Patch up a broken AVI file -- DivFix+ [<http://divfixpp.sourceforge.net/index.php>] is an AVI repairer that fixes the AVI file by rebuilding the index part of the file thus allowing for it to playback. This is useful for some corrupted torrent files. The handy Dr.Fixit does not take up much CPU and also comes as a standalone executable not requiring an installation.

Read more about it here - **How to Repair Broken AVI Files That Won't Play**

[<http://www.makeuseof.com/tag/how-to-repair-broken-avi-files-that-wont-play-windows-only/>].

3.3 Using RSS Feeds to be in touch with the movies

There's a new release every Friday. There's a new upload even more often. So how do we keep ourselves informed with the rapid change before it goes by in a blink – RSS feeds of course!

RSS is what it is because of two reasons –

- It allows us to easily be in the know by fetching the latest content from the sites you are interested in.
- We don't need to visit each and every site individually.

Now, armed with a Feed reader, we can wait, catch and watch the movie we want.

MakeUseOf.com author Varun Kashyap's post on **How to Use RSS Feeds to Download Torrents Automatically** [<http://www.makeuseof.com/tag/how-to-use-rss-feeds-to-download-torrents-easily-and-automatically/>] goes into the simple detail of setting up a RSS feed for the torrents you want to download. With his how-to, you can set up your torrent client to grab the right movie or TV show torrent and start the download automatically.

4 RSS Feeds for the Movies Addict [<http://www.makeuseof.com/tag/4-rss-feeds-for-the-movies-addict/>] gives us four super-useful RSS feeds - Rotten Tomatoes [<http://www.rottentomatoes.com/>] (for upcoming movies), a feed for what's playing at your favourite theatre, a feed for what's the latest at Hulu, SurfTheChannel and one for movie/TV show playtimes courtesy LocateTV [<http://www.makeuseof.com/dir/locatetv-film-tv-listings-search-engine/>].

Today, all sites worth their rep have an attention-grabbing RSS button. Some even have a different feed for different types of information. Here's IMDB's feed button located at the bottom of the page.

Clicking on it show's you what's available from the website.

What RSS feeds are available from IMDb?

There are a number of RSS feeds available from IMDb, and we'll be adding more and more in the future. For a brief intro on RSS, [click here](#).

News

Our news is available as a combined feed (all sources) [RSS](#) as well as individual feeds for WENN [RSS](#) and Studio Briefing [RSS](#)

We also produce feeds for various "happening today" information, including: "Born On This Date" [RSS](#), "Died On This Date" [RSS](#), as well as the daily poll [RSS](#)

You can thus select the feed of your choice and get to the meat of the brouhaha.

3.4 All You Need to Catch Your Movies

This is where online movies score over downloaded ones. All you need to watch online movies are a good browser and sufficient bandwidth. But downloading movies to watch at your leisure is a job. So you need to put together quite an assortment of applications and software to make a tidy job of it.

a) Bandwidth

Let's say too much is never enough when it comes to bandwidth whether it is online or for downloads. On the lowest side, **256kbps** is sloth slow. It takes 6-7 hours to stream/download an entire movie. An online service like Hulu recommends –

*Our videos stream at **480Kbps** or **700Kbps**, and we'll adjust our stream based on your bandwidth, but we recommend a downstream bandwidth of **1,000Kbps** or higher for the smoothest playback experience.*

In my opinion, **700kbps** is the standard to aim for. Remember, with Hi-definition and Blu-Ray coming into the scene, file size might swell up. With lower bandwidths you still can download movies, but then patience should be a virtue.

Test your bandwidth at – Speed Guide [<http://www.speedguide.net/>], Bandwidth Place [<http://www.bandwidthplace.com/>] or Speed Test [<http://www.speedtest.net/>].

b) Hard drive space

When it comes to movies think gigabytes. An average movie is 700MB. Make sure you have enough space on your hard disk drive. The best solution is to get an external hard drive just to store the classics for your sunset years.

c) Software

For BitTorrent – If it's to be lightweight, super-efficient and feature rich then I wouldn't hunt beyond **uTorrent** [<http://www.utorrent.com/>]. Wikipedia has a detailed comparison [http://en.wikipedia.org/wiki/BitTorrent_client/] of BitTorrent clients.

Mac OS users can check out the beta version of uTorrent or the cross platform BitTorrent client – **Transmission** [<http://www.makeuseof.com/tag/transmission-the-lightweight-bittorrent-client/>].

For other P2P networks – **Limewire** [<http://www.limewire.com/>] is P2P software which uses the Gnutella network. It also has limited BitTorrent support. The free and lightweight Limewire clone called **Frostwire** [<http://www.makeuseof.com/tag/frostwire-a-clone-that-surpasses-the-original/>] surpasses the original in many respects. Another good one is **Shareaza** [<http://shareaza.sourceforge.net/>] which supports Gnutella, Gnutella2, eDonkey Network, BitTorrent, FTP and HTTP.

For FTP – You might come across some file sharing websites allowing FTP transfer. File Transfer Protocol is a very simple client-server exchange process over a network. It is especially useful for bulk

transfer of files. **FileZilla** [<http://filezilla-project.org/>] is a popular FTP client. It is lightweight, cross platform and also has a portable version. Mac users can also pick out any one from our review on **8 Free FTP Clients for Mac** [<http://www.makeuseof.com/tag/8-free-ftp-clients-for-mac/>]. Then there are **online FTP clients** [<http://www.makeuseof.com/tag/use-ftp-online-without-installin-a-client/>] too which let you access files from a public computer.

Archiving / Un-archiving

While downloading (or uploading) you are more likely to bump into the RAR/ZIP format than anything else. To extract the files, you need the indispensable archiving application. For free alternatives to WinRAR and WinZip, look at what we think are **The Top 3 File Compression & Extraction Software's** [<http://www.makeuseof.com/tag/the-top-3-file-compression-extraction-softwares/>] - *Universal Extractor*, *KGB Archiver* and the multi-platform *7-Zip*.

Security

Downloads and high speed bandwidth are come hither invites for viruses and Trojans. Firewalls and updated anti-virus guards are always the first line defense. The worthy ones are: Zone Alarm Free Firewall, Comodo Firewall, AVG Anti-Virus, and the list continues. While on the topic of security, you can hop over and read this post on the Best Programs to Keep Your Computer Secure [<http://www.makeuseof.com/tag/best-programs-to-keep-your-computer-secure/>].

Playback

The four all-purpose video players that should handle and play any video file are: Windows Media Player, VLC player, Media Player Classic and DivX player. Along with the right codecs which we have covered in the previous section, you should have your all-purpose media box. Check out what is the most popular video player among MakeUseOf readers here [<http://www.makeuseof.com/tag/muo-polls-free-video-players-what%E2%80%99s-your-favorite/>].

File Conversion

Media is plural in literal terms and in actuality when we venture into file formats. Being in the digital age, we have more than one type of digital product and sometimes one file format may not play in the other. Thus, having a media converter helps with the mixing and matching.

With **5 Easy-to-use Freeware Video Converters** [<http://www.makeuseof.com/tag/5-easy-to-use-freeware-video-converters/>] we have looked at Quick Media Converter, Super Video Converter, Any Video Converter, MediaCoder and Format Factory.

If you are looking for a tiny app to convert your videos to carry along in an iPod or a PSP, look at **EncodeHD** [<http://dcunningham.net/encodehd/>]. It's a great little app which converts for devices from Apple, Blackberry, Playstation, X-Box, Zune and even YouTube HD. Read the how-to here [<http://www.makeuseof.com/tag/encodehd-easily-convert-media-files-for-any-devices-windows/>].

Linux and Mac users can look at – WinFF and Handbrake for their file conversion jobs. Read about a few more handy apps along with these two here [<http://www.makeuseof.com/tag/10-applications-to-convert-audio-and-video-files-in-linux/>].

Burning Utilities

Nero is the name which comes to mind first. But why spend \$80 when you have lighter alternatives for both your wallet and PC available? Here's looking at some free alternatives to Nero which can do the job of writing DVDs just as well.

- **CDBurner XP** [<http://www.cdburnerxp.se/download>] - At 3.6MB it includes support for Blu Ray/HD DVD and Bin to ISO conversion too.
- **InfraRecorder** [http://infrarecorder.sourceforge.net/?page_id=5] - Very light and can do multi-session burning and creating dual layer DVDs.
- **Deep Burner (Free)** [<http://www.deepburner.com/?r=download>] - The free version is slightly restricted but does all the simple jobs.
- **Ultimate CD/DVD Burner** [<http://www.mispbo.com/burner.htm>] - A simple and intuitive interface and has a portable version too.
- **Burn At Once** [<http://www.burnatonce.net/downloads/>] - It has a drag and drop interface and features tagging of media by importing data from FreeDB.
- **Burn Aware (Free)** [http://www.burnaware.com/burnaware_free.html] - Is very intuitive, features on the fly recording and supports the Blu Ray format.
- **ImgBurn** [<http://www.imgburn.com/>] - If you are looking for an all-rounder, this one comes fits the bill. Supports a wide variety of formats and runs on Linux too.
- **FAVC** [<http://favcfavc.googlepages.com/>] – This is a free collection of tools using a common GUI to convert your media files, such as AVI, MP4, WMV and more to a DVD disk. FAVC uses several other free software to burn the DVD.

The above applications have been featured in our Best Free Alternatives to Nero CD/DVD Burner [<http://www.makeuseof.com/tag/the-best-free-alternatives-to-nero-cddvd-burner/>] post. But you might like to take a look at the homepages to see the compatibility with your requirements and hardware.

Mac users don't need to download anything separately as it comes with an integral burner. The inbuilt burner does the job as well and without the need to add anything extra. Read about the four ways to burn CDs and DVDs easily [<http://www.makeuseof.com/tag/4-ways-to-burn-discs-for-free-mac/>] on the Mac.

4. Expanding Your Movie Experience

The show's over and we amble down the aisle towards the exit. Not quite, as this is the World Wide Web motivated PC. There is so much more to play around with.

4.1 Read the lingo with subtitles

Don't ask me why, but I just can't catch Nicholas Cage's mumbles. Maybe it's my ears or the audio coding. But whatever, it's why I feel that adding subtitles helps a lot to understand the dialogs. Thanks to some sites, now we can add download and add subtitles on our own without ringing the producers.

I won't go into the details of how to overlay subtitles using software like DirectVobSub or how to burn it permanently using Windows software. Simon's tutorial on **How to Add Subtitles to a Movie or TV Series** [<http://www.makeuseof.com/tag/how-to-add-subtitles-to-a-movie-or-television-series/>] should show you the ropes.

What I will do is to point you towards some of the better subtitle downloading sites.

- **Open Subtitles** [<http://www.opensubtitles.org/en>]
- **Subscene** [<http://subscene.com/>]
- **DivX Subtitles** [<http://www.divxsubtitles.net/>]
- **AllSubs** [<http://www.allsubs.org/>]
- **Subtitle Source** [<http://www.subtitlesource.org/>]
- **Subtitle Online** [<http://www.subtitleonline.com/>]

All the subtitle sites are searchable. Alternatively, you can also use a web-wide search engine like Subtitlesearch [<http://www.subtitlesearch.net/>].

4.2 Music and Lyrics

It's not about the burnt out singer who falls in love. It is the music and lyrics that play in the background. The melancholic trumpet of a violent 'The Godfather' or the solo voice of William Shatner during the opening of Star Trek. The music plays on in some of these sites –

SoundTrackInfo [<http://www.soundtrackinfo.com/>] - This is an exhaustive site for soundtrack info. Use the search feature to browse by movie title, song title, composer's name, performer's name or browse movies alphabetically.

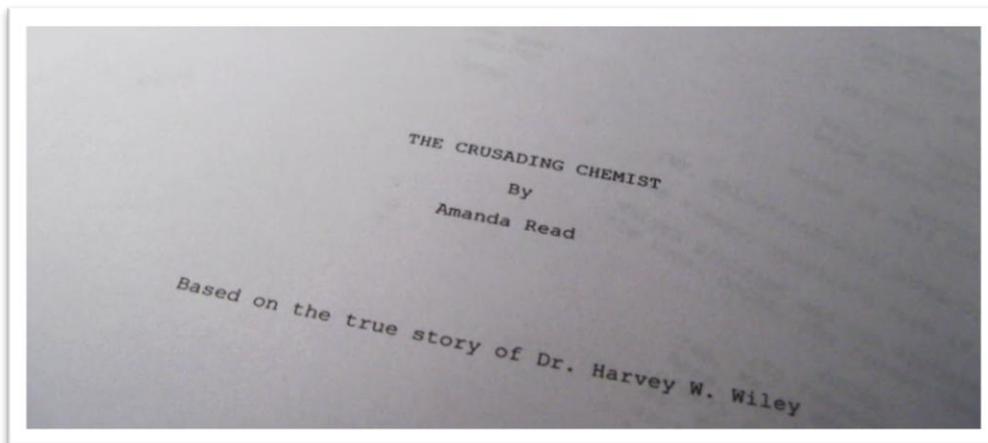

Soundtrack Collector [<http://www.soundtrackcollector.com/>] - Share notes on soundtracks of films and TV shows. The site is more like an online community of people interested in movie soundtracks. It also allows you to store your movie soundtrack collection and share wish lists. (Check out the music sites page [<http://www.soundtrackcollector.com/resources/index.php?categoryid=21>] for a list of movie soundtrack sites).

Tracksounds [<http://www.tracksounds.com/>] – The nearly decade old site offers soundtrack reviews, composer interviews and movie contests.

ScoreNotes [<http://scorenotes.com/>] – It is a "fan's" tribute to the genre of film music. An uncluttered interface brings us movie reviews, audio reviews and a music library with MP3 sound clips.

4.3 The words the stars speak

How does Johnny Depp speak the dialogs he speaks? Of course, it's his acting but credit is also due to the unheralded penmanship of men behind the script. Have you ever read a movie script? There are a few sites which host copies of the script for us to look over and of course to appreciate the actors who give life to the one dimensional words.

The Internet Movie Script Database [<http://www.imsdb.com/>] sounds a lot like IMDB and it aims to do the same turn to film scripts as IMDB.com has done to indexing films.

Or just check out Yahoo's directory

[http://dir.yahoo.com/Entertainment/Movies_and_Film/Screenplays/] of screenplay sites for the bucket list.

4.4 Build your own movie library

It starts with a trickle of few classics then maybe your favorite westerns or the entire 11 seasons of M*A*S*H. Soon, your hard drive is being hogged for space and you don't know where you kept Episode 13 of Season II. It's always better to become organized before the mass of files builds up to unwieldy levels. Thanks to the choices of online and offline collection managers, file management is a cinch, habit is the problem.

a) Desktop apps to catalog your collection

Griffith [<http://www.griffith.cc/>] - a cross platform application which refers the movie title and fetches the movie information from the web. It also has multi-language support.

GCstar [<http://www.gcstar.org/>] - Though primarily for Linux, it also runs under Windows and with some configuration for Mac OS X. It is a well packaged free software.

Libra [<http://www.getlibra.com/>] - It's for Windows XP and Vista. Adding features are simple and though it's more in tune with e-books (has a useful barcode feature), it's handy for movie collections too.

Data Crow [<http://www.datacrow.net/>] - Runs on both Mac and Windows. Data Crow takes the entered media name and retrieves information from Amazon and/or IMDB. It also comes with a report (HTML/PDF) tool and backup-restore features.

Movienizer [<http://www.movienizer.com/>] - This freeware not only helps you manage, track, and research your movie collection but also gathers relevant info on stars, plots, reviews, download DVD covers, add DVD using barcodes and keep track of movies you have lent out. All with mouse clicks.

Further reading - 4 Open Source Collection Manager Apps [<http://www.makeuseof.com/tag/4-open-source-collection-manager-apps/>]

b) Online apps to catalog your collection

iTrackMine [<http://www.itrackmine.com/>] - An online collection manager for tracking, trading, and lending various items like movies, books, games, wine, and gadgets. You can add movies by scanning barcodes, searching, importing from files, or from iTunes, CollectorZ, Delicious Library, etc.

GuruLib [<http://www.gurulib.com/>] - Accesses 530 public and university libraries around the world to collect cataloging information about hard-to-find books, movies, games and software. Also lets you know if the missing piece is available near your location. It is feature rich with provisions to add DVD/Books using barcode images. Also, extends to social networking with a Facebook application, iGoogle Module, RSS Feeds and Blog widgets.

DVD Corral [<http://www.dvdcorral.com/>] - An online DVD cataloging service with a slick interface. Export your preexisting catalog the online service in CSV, XML formats. Cataloging is free without limits and it also lets you buy movies or view online from Amazon and Netflix.

DVDAficionado [<http://www.dvdaf.com/>] - Share, browse, and search your collection, get cheapest

prices and do all this using your cellphone. DVD Aficionado is very handy for collecting DVDs and finding bargains on DVDs.

DVDCrate [<http://www.dvdcrate.com/>] – You can track your collection from multiple perspectives using this online service. Figure out who your favorite actress really is or your most liked genre. Share reviews of films you have watched or enter your wish list.

4.5 Spruce it up with wallpapers, posters and CD covers

Remember the wonder years, when the walls had more paper than paint. Chock-a-bloc with every pretty face we could find. Now we plaster the computer screen. The magic of movie posters and wallpapers never fades (Sharon Stone's sultry eyes looking over Michael Douglas' shoulder or Christopher Reeves with billowing cape over the Earth!).

a) Wallpapers

I have listed just three as sample examples.

- **MovieWallpapers** [<http://www.moviewallpapers.net/>]
- **Cinematic Wallpaper** [<http://www.cinematicwallpaper.com/>]
- **AtoWW** [<http://www.atoww.com/>]

Wallpaper and poster sites are dime a dozen; a Google search yields those many. Then there are also still the official movie sites which bring out wallpapers as a promotional vehicle.

b) Online tools for creating CD covers and sleeves

This is a more niche requirement. Creating personalized DVD covers is just another facet of an organized mind.

PaperCDCase [<http://www.papercdcase.com/>] has an interface which helps to create print ready PDF files which can be folded to create CD cases. The cover can be designed to show information like mailing information tracks and little graphics. Use a CD search engine to find out if anyone has created a similar cover before.

Type Paper Jewel case

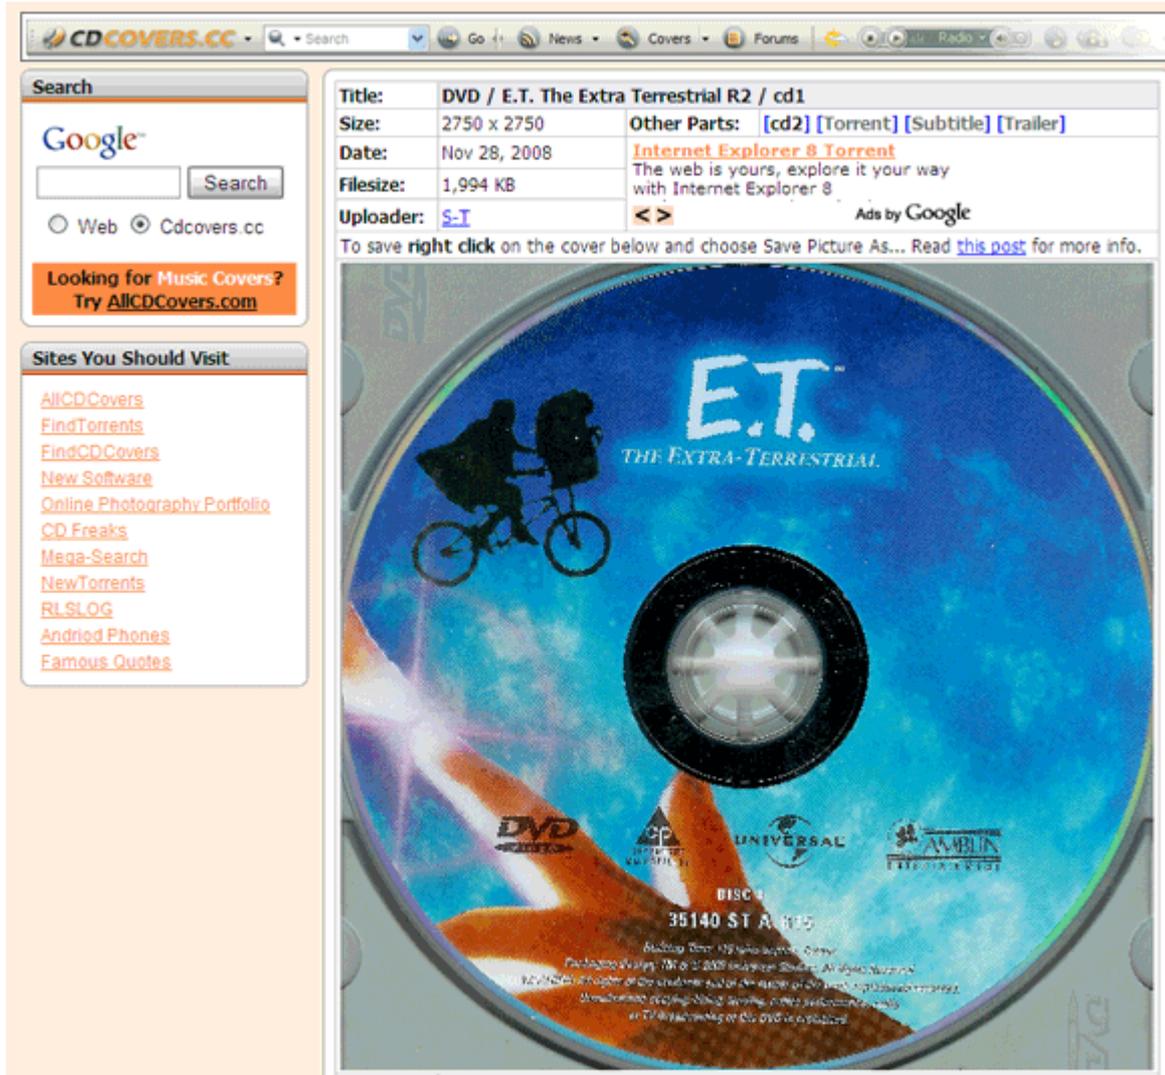

See the paper case page at **Liquid Mongoose** [<http://liquidmongoose.com/paperCase.php>] which gives you the ability to find relevant album art and turn a fold-able piece of paper into a CD or DVD case.

A similar site is **CoverCreator** [<http://www.readwritethink.org/materials/cd-dvd/>] which uses a Flash cover maker to design your own CD/DVD covers or booklets and then print them out.

CD Covers [<http://www.cdcovers.cc/>] claims to be the world's largest archive of covers. Search from a large quantity of music and movie covers, free of charge. You can either drag the image to their cover printing software where it's made ready to print or you can download the image to your computer.

MakeUseOf.com Articles on Movies and Related Websites

Through this short guide we have merely played out the first few scenes. A lot of other relevant sites and tools have missed a mention here and many continue to debut each day. Here at MakeUseof.com, we are usually on the ball with our constant lookout for exciting websites, web apps and freewares to write about. Over the past months, check out what's all been said on movies and media here...

And He Rode Into The Sunset...

Every good thing must come to an end. Thankfully with movies, there's always a fresh one to look forward too. We hope you have taken something from this little guide, something that will help you find a great movie for the perfect two hours.

Let's end with Humphrey Bogart famously misquoted line from Casablanca – *"Play it again, Sam."*
